Use case UC3: Cancel appointment

Primary Actor: Patient or Authorized clinic staff

Stakeholders and Interests:

- Patient: Wants to cancel an existing appointment and receive a confirmation.
- Staff: Wants to manage appointment cancellations on behalf of patients to ensure appointment records are accurate.
- Healthcare professional: Wants the informed when an appointment is cancelled so that their schedule is accurate.

Preconditions:

- The patient or clinic staff must be authenticated.
- The patient must be registered as a client of the clinic.
- Their must be an existing appointment in the name of the patient.
- Staff members must be authorized to cancel patient appointments.

Postconditions:

- The appointment's status is changed to "cancelled" and recorded in the system.
- The appointment remains associated with the patient.
- The appointment's time slot becomes available for other appointments.
- The system displays a cancellation confirmation.

Success scenario:

1. The actor requests to view upcoming appointments.
2. The system displays the upcoming appointments associated with the selected patient.
3. The actor selects an appointment.
4. The system displays the selected appointment's details.
5. The actor requests to cancel the appointment.
6. The system asks the actor to confirm the cancellation.
7. The patient confirms the cancellation.
8. The system changes the appointment status to "cancelled" and displays a confirmation.

Failure scenario:

1. The patient requests to cancel the selected appointment (ie. step 5).
2. The system rules that the appointment is not eligible for cancellation.
3. The system displays an error message stating the reason why the appointment cannot be cancelled
4. The appointment status remains unchanged.

Special Requirements:

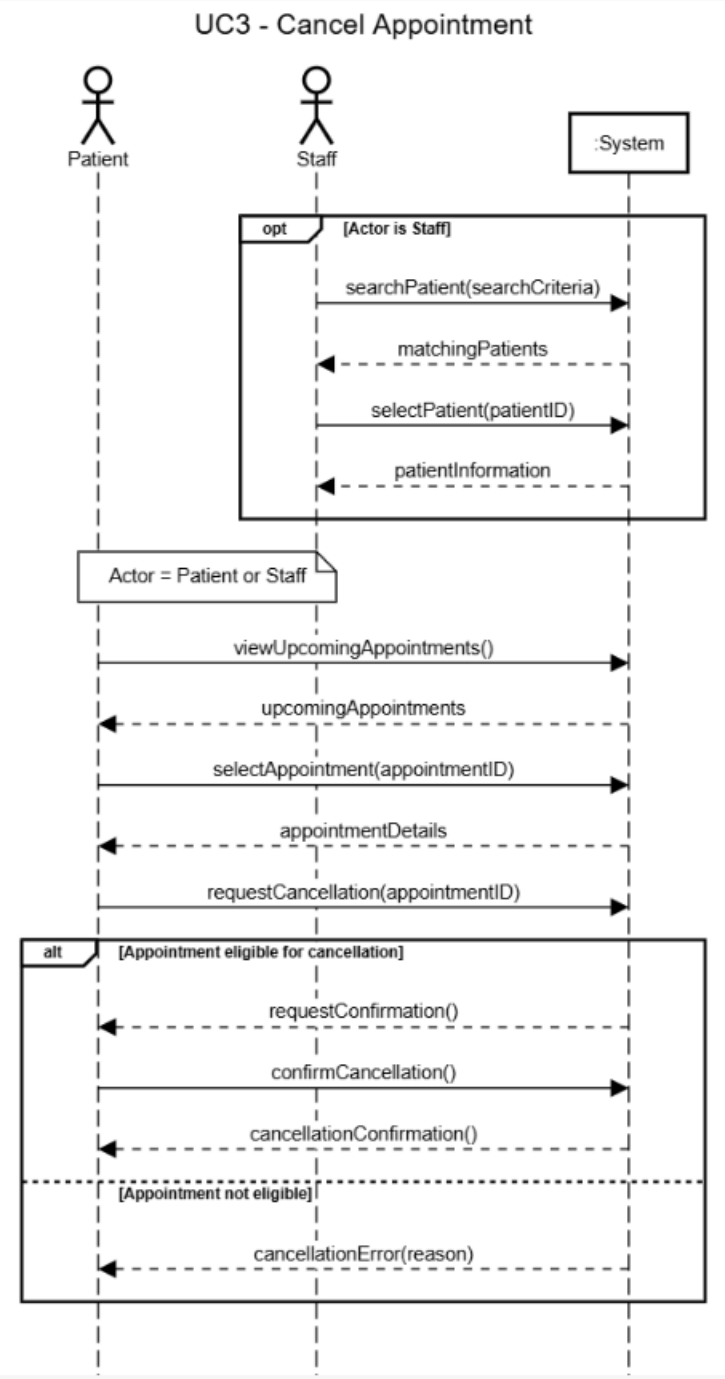

- The system must restrict appointment cancellation based on user's role.
- The system must verify that the appointment is eligible for cancellation.
- The system must update the appointment without deleting the appointment record (soft deletion).

Technology and Data Variations List:

- Appointments are identified through a unique ID.
- Staff can search for a patient's appointments using their insurance number, date of birth, phone number, or partial first name and/or last name.

Open issues:

Is there a minimum notice period required to cancel an appointment?
